Список таблиц

1 Цель работы

Установите DVWA в гостевую систему к Kali Linux.

2 Выполнение индивидуального проекта

Для начала откроем репозиторий и скопируем команду для установки DVWA

```
(root@sikaznacheev)-[~]
# sudo bash -c "$(curl --fail --show-error --silent --location https://raw.githubusercontent.com/IamCarron/DVWA-Script/main/Install-DVWA.sh)"
```

DVWA
INSTALLER

Welcome to the DVWA setup!
Script Name: Install-DVWA.sh
Author: IamCarron
Github Repo: <https://github.com/IamCarron/DVWA-Script>
Installer Version: 2.0

Рис. 2.1: 1

После установки появится ссылка на DVWA

```
Restarting Apache...
DVWA has been installed successfully. Access http://localhost/DVWA to get started.
Credentials:
```

Рис. 2.2: 2

Откроем ее и нажмем на create / reset Database

Рис. 2.3: 5

Затем введем данные которые выдались после установки DVWA

```
DVWA has been installed successfully.
Credentials:
Username: admin
Password: password

With ♥ by IamCarron
```

Рис. 2.4: 3

После чего мы увидим, что у нас все получилось и мы зашли

Welcome to Damn Vulnerable Web Application!

Damn Vulnerable Web Application (DVWA) is a PHP/MySQL web application that is damn vulnerable. Its main goal is to be an aid for security professionals to test their skills and tools in a legal environment, help web developers better understand the processes of securing web applications and to aid both students & teachers to learn about web application security in a controlled class room environment.

The aim of DVWA is to **practice some of the most common web vulnerabilities**, with **various levels of difficulty**, with a simple straightforward interface.

General Instructions

It is up to the user how they approach DVWA. Either by working through every module at a fixed level, or selecting any module and working up to reach the highest level they can before moving onto the next one. There is not a fixed object to complete a module; however users should feel that they have successfully exploited the system as best as they possible could by using that particular vulnerability.

Please note, there are **both documented and undocumented vulnerabilities** with this software. This is intentional. You are encouraged to try and discover as many issues as possible.

There is a help button at the bottom of each page, which allows you to view hints & tips for that vulnerability. There are also additional links for further background reading, which relates to that security issue.

WARNING!

Damn Vulnerable Web Application is damn vulnerable! **Do not upload it to your hosting provider's public html folder or any Internet facing servers**, as they will be compromised. It is recommend using a virtual machine (such as [VirtualBox](#) or [VMware](#)), which is set to NAT networking mode. Inside a guest machine, you can download and install [XAMPP](#) for the web server and database.

Disclaimer

We do not take responsibility for the way in which any one uses this application (DVWA). We have made the purposes of the application clear and it should not be used maliciously. We have given warnings and taken measures to prevent users from installing DVWA on to live web servers. If your web server is compromised via an installation of DVWA it is not our responsibility it is the responsibility of the person/s who uploaded and installed it.

More Training Resources

DVWA aims to cover the most commonly seen vulnerabilities found in today's web applications. However there are plenty of other issues with web applications. Should you wish to explore any additional attack vectors, or want more difficult challenges, you may wish to look into the following other projects:

- [Mutillidae](#)
- [OWASP Vulnerable Web Applications Directory](#)

Рис. 2.5: 4

3 Вывод

В результате работы был установлен DVWA в гостевую систему к Kali Linux.
